

EDUCATION

DAYANANDA SAGAR ACADEMY OF TECHNOLOGY , Bangalore , Karnataka
Degree: Bachelor of Engineering in Computer Science And Engineering

Graduation date: [June 2022](#)
GPA: 8.9 / 10.0

WORK EXPERIENCE

Senior Software Engineer | SolarSquare

[Sept 2025 - present](#)

- Built and maintained a **distributed task scheduler** ingesting real-time telemetry from 4+ inverter OEMs (Sungrow, SolarEdge, Havells, GoodWe) for 15,000+ customers — handling token expiry recovery, missed-run backfill, idempotent execution, and automated WhatsApp generation reports and payment notifications.
- Designed and built **Sixth Sense** end-to-end — system architecture (HLD), infrastructure design, database schema, API layer, and real-time data observability dashboard for investors. Engineered Python automation for efficient large-scale telemetry ingestion, optimized PostgreSQL/MongoDB queries, and tuned API performance for low-latency delivery.,
- Led the migration of inverter infrastructure from MongoDB to PostgreSQL — schema redesign, data restructuring, cross-service coordination — enabling downstream pipeline simplification and making it 5x efficient.
- Sole developer on the Airflow-based ETL repository: optimized multiple long-running Python pipelines (Mongo-to-Postgres migration, inverter generation data fetches) by introducing batching, memory profiling, and rewriting inefficient logic — delivering reliable execution and a 10x speedup.

Senior Software Engineer | One97 CommunicationLtd ,Paytm

[July 2024 - Sept 2025](#)

- Revamped an existing project in Java(Spring-Boot), implemented memory-saving optimization for both application and kafka resulting in enhanced performance and resource efficiency with 40% reduction of server cost This includes updating Kafka versions, alongside fulfilling various business tasks.
- Collaborated with cross-functional teams to develop both **High-Level Design (HLD)** and **Low-Level Design (LLD)** documents for application architecture, ensuring scalable, efficient, and maintainable solutions. Designed system workflows, data flow diagrams, and component interactions, aligning technical solutions with business requirements while adhering to industry best practices and optimising performance for high-traffic environments.

Software Development Engineer | One97 CommunicationLtd , Paytm

[July 2022– June 2024](#)

- Integrated merchant platforms (HeroFincorp, Shopify, Wix, BPCL) with Paytm's payment infrastructure, enabling seamless transaction processing and automated fuel station billing.
- Built a real-time multi-channel notification service (SMS, push, email, Slack, WhatsApp) handling transaction alerts for Paytm's users and merchants at scale using Kafka, Redis, and distributed systems.
- Optimized AWS instance allocation and Kafka throughput for high-traffic loads, cutting infrastructure costs; monitored production via Prometheus, Grafana, and Kibana..

Software Engineer Intern | One97 CommunicationLtd ,Paytm Payments Bank

[April 2022- July 2022](#)

- Created comprehensive documentation outlining all microservice platform features and implementation procedures, facilitating client onboarding .
- Improved the code quality by addressing Sonar issues and implementing Junit test cases .

Cyber security Intern | 1Stop.io

[Jan 2022- April 2022](#)

- Understanding of cybersecurity principles and best practices.Knowledge of network security protocols and technologies. Proficiency in using cybersecurity tools such as Wireshark, Metasploit, and Nessus .

Software Engineer Intern | Tequed Labs

[June 2021- Nov 2021](#)

- Designed and developed result webpages for online school management systems for candidate's Personal Information dashboard .

ACHIEVEMENT

- Recognized as a Rising Star and Hall Of Fame at Paytm within one month of joining, demonstrating rapid adaptation and impactful contributions .
- Recognized as Rockstart at Paytm within one month of joining, demonstrating rapid adaptation and impactful contributions

PROJECTS

Prodbeat (Co-Founder) | [Link](#)

- *Architected and built a real-time observability platform from scratch — session replay, log ingestion, error tracking, and backend monitoring — deployed as a multi-service system on AWS ECS Fargate with auto-scaling, host-based routing (api/auth/console subdomains), PostgreSQL, Redis, Kafka, and S3.*

Neetly AI (Co-Founder) | [Link](#)

[Open AI](#) , [Gemini](#) , [Langchain](#) ,[Node js](#)

- Developed an AI-powered platform that generates multiple-choice questions (MCQs) by processing image data and text inputs. Integrated OpenAI's language models for natural language understanding and utilised vector databases with embeddings to enhance semantic search and retrieval, enabling efficient educational content creation.

Cyber Safe Chatting App | [Link](#)

[React js](#) ,[Node js](#) ,[TensorFlow js](#)

- Developed an AI ML TensorFlow-based chat application that empowers users to prevent cyberbullying in private chat rooms. Leveraged Socket.IO for real-time interpersonal communication with Node.js backend.

Rasan Shopping Cart | [Link](#)

[React](#),[Node](#),[Express](#),[Mongo](#)

- Created a comprehensive website featuring a user-friendly interface, seamless checkout option, an intuitive admin panel, and detailed product delivery reporting capabilities .
- As a backend developer, I implemented core algorithms to predict profit probabilities by analysing historical data, market trends, and financial indicators.

SKILLS

Languages: Python, SQL, JavaScript/TypeScript, Go , Java

Databases: PostgreSQL, MongoDB, Redis, ClickHouse

Infrastructure & Cloud: AWS (ECS Fargate, S3, RDS, ElastiCache, ALB, Secrets Manager, ECR), Terraform, Docker, Kubernetes, ArgoCD

Data & Pipelines: Apache Kafka, Apache Airflow, ETL design, batch processing

Observability: Datadog, Grafana, Prometheus, Kibana, Redash

DevOps & CI/CD: GitHub Actions, Jenkins, Bitbucket Pipelines, Linux

Other: REST API design, WebSockets, multi-tenant architecture, Jira
